

For Immediate Release:

SeaKey® Safety and Security Technology, Now Available For All Boaters

Bethesda, MD, July 19, 2006: Today at MAATs, SeaKey, LLC debuted their new safety and security system, [SeaKey v2.0](#), now available to be installed on any boat. SeaKey v2.0 is a satellite-based, safety & security system that communicates vital boat information to the SeaKey 24/7 Response Center, as well as to the boat-owner's personal website.

Building on the success of its predecessor in recovering stolen boats and rescuing boaters in distress, the new [SeaKey v2.0](#) offers a variety of new features including 2-way text message email, global coverage and award-winning concierge services - all without the need of any additional equipment.

“We are pleased to now be able to offer our enhanced satellite communication services to all boaters”, says Jan Hellaker, General Manager of SeaKey, LLC. “We’ve had tremendous interest during the last year from boaters looking to add the system to their current or new vessel.”

In addition to the 40+ OEM partners that offer SeaKey as a factory installation option, SeaKey is seeking distributor and dealer partners.

About SeaKey, LLC

SeaKey, LLC is the leader in providing telematics products for the marine industry, including its SeaKey satellite communications system. SeaKey, LLC offers an array of services that cater to boater safety, boat security and boater enjoyment, including an advanced emergency messaging system that can pinpoint a distressed boat's location offshore. SeaKey can also alert boat owners to problems when they are not using their boats, such as low battery voltage or water intrusion in the bilge. In addition, SeaKey has a proven record of assisting law enforcement agencies in tracking and recovering stolen boats.
