

For Immediate Release:

## **SeaKey® Recovers Another Stolen Boat**

**Bethesda, MD, October 23, 2006:** SeaKey, LLC, the leader in satellite safety and security communications, provided precise location information that allowed the Miami-Dade Police Department to find a boat stolen this weekend, and made an arrest on the scene.

On Friday, October 20, 2006 one of a boat-owners' worst fears was realized. He had just purchased a well-equipped Wellcraft and was looking forward to enjoying the boat this weekend – but now, the boat was gone. The boat-owner called the SeaKey Response Center, which is manned 24/7 with trained professionals, asking them to track the boat. Even though the boat was actually stolen sometime Thursday, the SeaKey® system was able to pin-point the current location of the vessel. When police arrived at the location SeaKey provided, they found the boat in the process of being stripped and made an arrest.

Miami-Dade Police officer Neubauer stated while talking to the SeaKey Response Center Coordinator, “[Darn], this thing works good!”

Normally, SeaKey's GeoFence alarm would immediately signal the Response Center that the boat is being moved, however at this time the owner had not armed the GeoFence.

SeaKey® is a satellite-based, safety & security system that communicates vital boat information to the SeaKey 24/7 Response Center, the boat owner, and the owner's personal SeaKey website. This system monitors the location, onboard battery voltage, and bilge water level. The system includes a sophisticated GeoFence that will send notification of the vessel's movement outside a predetermined area.
