

For Immediate Release:

Boaters Trust SeaKey's Proven Service and Reliability

Bethesda, MD, October 26, 2006: SeaKey, LLC, the leader in satellite safety and security communications, heralds a successful recovery and recent customer accolades.

While fishing more than 35 miles off the Texas Gulf coast, the crew of the Blue Adonis lost both her outboard engines. Beyond the coverage of traditional communications systems, the owner activated his SeaKey® SOS system and within minutes, the Response Center was in action, coordinating with the US Coast Guard; providing them the vessel's exact GPS location. The Coast Guard found all aboard safe and sound with life jackets on, food and water, and the vessel without maneuverability. The vessel was later brought safely back to her berth. "We are very pleased with the service", said Mrs. Cole, "SeaKey called me regularly to keep me up to date on the situation. We bought the boat because it came with SeaKey. Because of the diligence of the staff and personnel at SeaKey, our vessel and its entire crew were towed in safely."

SeaKey is a satellite-based, safety & security system that communicates vital boat information to the live 24/7 Response Center, to the boat owner, and the owner's personal SeaKey website. Since the system is satellite based, the boat owner is assured that the vessel's location and message is received, even if outside of cellular range, or outside the VHF range of shore or another vessel. In addition, the SeaKey system monitors the onboard voltage, bilge level, when someone is onboard and includes a sophisticated GeoFence that will send an alarm if the vessel is moved.

One of our Raving Fans said it best; "I cannot imagine running to Bimini or Freeport [Bahamas] without the security of the SeaKey system" reports SeaKey owner Captain Steve D'Amato of Port Everglades, FL. "The concierge service assisted me with helpful information while cruising in the Keys. My wife was able to track my progress giving her peace of mind. I feel secure with the system onboard after using it for close to four years, with over 800 hours logged on the system and over 120 trips recorded. It's never failed me once!"
